

PRAKTIKUM IN LONDON

BUSINESS, FINANCE AND ACCOUNTANCY RESEARCH AND BUSINESS PLAN DESIGN.

REF. No. 1253

About us

Our company is committed to face the environmental issues of the world by creating realistic yet entirely new profit-based solutions. We are agile and shallow tier and expect all of our people to act and react as if the future of the planet is in their hands.

We are a combination of innovative development engineers, artists, business minds, designers and lawyers who have worked with the most technologically advanced companies on the planet.

Legally we are a London UK establishment, although that is for the purposes of company registration.

As having a fixed office space is wasteful and polluting, we are virtual, but if needed, we use a temporary space to meet. If not, it is all about Zoom/Skype and getting on with the job as a semi-autonomous agent of a larger entity.

If you are expecting to be told exactly how to solve a problem that we set for you then we will have already solved that problem ourselves.

We have created an entirely unique system which deals with some of the main environmental problems and would want you to work as an innovative and equal partner to develop those systems.

Number of employees

2-20 depending on the tasks set

Tasks

PLEASE NOTE: In order to protect our Intellectual Property, it is an absolute requirement that any successful candidate will be required to declare that they fully understand the details and implications of our Non-Disclosure Agreement and to then sign our Non-Disclosure Agreement.

After full briefing regarding each of the projects reach and depth the successful candidate should follow through on the following:

Rapidly and accurately respond to ongoing questions relating to business plan design and facilitation as cited above from project personnel.

PRAKTIKUM IN LONDON

Rapidly and accurately review the company's Business Plans to date and produce insights on that work.

Rapidly and accurately design Business Plans on a project by project basis for each project.

In conjunction with the people on each project ensure that your Business Plan insights are fully integrated into the daily, weekly and monthly project by project objectives.

Manage the day-to-day Business Plan needs of a fast-moving company in a friendly and creative manner.

Sit in on fast moving digital meetings and provide Business Plan design and insights during and after those meetings in a friendly and positive manner.

Pro-actively create innovative ongoing Business Plan design and insights.

Business Plan design and insight-based reports on a demand based for the company Founders regarding all of the ongoing company projects.

Actively and autonomously seek out new raw data that creates new aspects to Business Plan design and creation.

Actively seek out and suggest new ways of approaching the company's Accountancy needs and wants.

Be interested, engaged, creative and proactive at all times.

You will be given a great deal of autonomy and responsibility.

We expect you to use that autonomy and responsibility to create real and directly applicable innovation.

Skills needed

Candidates should have a workable understanding of general Business, Finance and Accountancy working principles.

Candidates should have a fluent understanding of how to create commercially attractive, succinct and logical business plans.

Candidates should have a fluent understanding of Excel based business plan orientated spreadsheets and be able to create bespoke Macros within those spreadsheets.

PRAKTIKUM IN LONDON

Candidates should be able to express an interest in and produce business plans for the following areas of activity:

Reducing hotel energy use, video monitoring of large, remote and threatened natural environments, reducing oceanic pollution, eBike battery waste and methods to help to reduce early learning difficulties in developing countries.

Candidates should be able to build on extant business plan-based spreadsheets and be able to fluently repurpose embedded Macros.

Candidates should be able to autonomously seek out unique learnings from raw research sources and creatively deploy them within these five business plans.

Candidates should be able to extrapolate highly creative “what if” feasibility scenarios throughout their individual potential work parameters and to be able to supply answers to those “what if” feasibility scenarios.
