PRAKTIKUM IN LONDON

PROGRAMMING INTERNSHIP
REF. NO. 1250

About us

Our first product is a contextual reading assistant for the next generation of learners and knowledge workers. Our contextual reading assistant is always learning, just like you. It reads and learns with you in your unique way, helping increase comprehension and maintain focus in a world of distractions. We personalise the reading experience and include gamified element to encourage you to always go further.

Tasks

- We're seeking a Machine Learning Engineer intern to join us in building our prototype to ingest text and output insights including a gamified learning experience and predictive analytics.

- You will get to find shortcuts to getting the knowledge you need in an entertaining way, working on solutions for global publishing houses that publish validated knowledge and have the freedom and responsibility to help shape our core products from initial data exploration to production models. You will design and implement the foundation of our predictive models and work closely with other team members to test the accuracy with publisher's content.

  As a Machine Learning Engineer intern you will:
- Design and develop models that produce insights from text-based content.
- Build the analytics engine
- Build the gamification engine
- Develop, train, test, deploy and iterate on modeling approaches and methodologies.

Skills needed

The ideal candidate would be a front-end and backend developers seeking to gain experience at the frontier of machine learning driven gamified learning environments. Either of:

- designers with coding ability
- programmers with interest in and experience in machine learning environments.
